COMMONWORK · RETAILER GUIDE

The buying journey is changing before customers reach your shop.

Assistants, expert teams, governed product information and connected systems.

RETAILER GUIDE · 01 / 06

What changes

Agentic commerce presents real business challenges now. Research, product recommendation and delegated action are distinct capabilities.

Recorded shopping-research example

Editorial summary of the supplied assistant response

Demonstration prompt prepared for this example

> Portugal · lightweight, compact toddler stroller · €400–€700 demonstration budget

"My best fit is the Joolz Aer²…"

Joolz Aer²	Bugaboo Butterfly 2	Nuna TRVL lx
Retailer destination named in the supplied response: **Joolz Portugal**	Retailer destination named in the supplied response: **Bugaboo Portugal storefront · El Corte Inglés Portugal**	Retailer destination named in the supplied response: **Gotu Portugal**
[S1] Joolz Portugal — Joolz Aer² Space Black (https://joolz.pt/produto/joolz-aer2-space-black/)	[S3] Bugaboo — Butterfly 2, Portugal-facing storefront (https://www.bugaboo.com/pt-en/strollers/bugaboo-butterfly-2/bugaboo-butterfly-2-travel-stroller-PM007650.html) [S4] El Corte Inglés Portugal — Butterfly 2 (https://www.elcorteingles.pt/puericultura/A55550995-carrinho-de-passeio-butterfly-2/)	[S5] Gotu Portugal — Nuna TRVL lx (https://gotu.pt/products/nuna-carrinho-de-passeio-compacto-trvl-lx-ate-22-7-kg)
Is the product considered?	**Are its facts accurate?**	**Is our shop offered as the seller?**

Perplexity shopping-research example · Portugal request · One session; not a product test or visibility benchmark · No purchase demonstrated

One supplied session output—not a product test, visibility benchmark or purchase. The response's product facts, prices, stock and reported discrepancies have not been independently reverified; do not treat prices or availability as current.

Visibility and control

Separate the brand, retailer and platform questions. These are diagnostic questions, not asserted results.

Brand

Was the product understood and considered for the customer’s task?

OpenAI · Introducing shopping research in ChatGPT (https://openai.com/en-US/index/chatgpt-shopping-research/)

Retailer

Were the offer facts accurate, and was this retailer included as seller or destination?

OpenAI · Introducing shopping research in ChatGPT (https://openai.com/en-US/index/chatgpt-shopping-research/)
OpenAI · Buy it in ChatGPT: Instant Checkout and the Agentic Commerce Protocol (https://openai.com/index/buy-it-in-chatgpt/)

Platform

Where did discovery, comparison and the next action happen? The platform controls its own retrieval and presentation; no participant can guarantee placement.

OpenAI · Powering Product Discovery in ChatGPT (https://openai.com/index/powering-product-discovery-in-chatgpt/)

Expertise plus AI

This is the speaker’s recommended operating model. The workflows are proposals, not retailer case studies.

Marketing workflow

Customer question → expert judges audience, suitability, differentiation, substantiated claims and channel → AI assists with research, summarisation or adapting approved content → expert approves claims and handles exceptions → measure review time, correction rate and a campaign measure chosen before testing.

Begen · AdMultify by Begen (https://begen.ai/)

Operations workflow

Product/offer issue → expert identifies the source of truth, customer impact and safe correction → AI compares records, summarises a mismatch or drafts a work item → human approves changes and handles exceptions → measure resolution time, recurrence, data completeness and a preselected customer/operational measure.

Product data and connected systems

Govern product information and connect the systems a bounded use case needs. A new PIM is not required for every first experiment.

Start with existing systems

Find owners and current sources for product identity, attributes, claims, price, availability, delivery and returns. Use existing catalogue, commerce or ERP capabilities where they are sufficient.

Google Merchant Center Help · Product data specification (https://support.google.com/merchants/answer/7052112)

Assess gaps

Check completeness, variant consistency, update timing, provenance, permissions, feed/API access, security and exception handling. Destination-specific rules apply only to their destination.

Google Search Central · Introduction to Product structured data (https://developers.google.com/search/docs/appearance/structured-data/product)

Google Merchant Center Help · Product data specification (https://support.google.com/merchants/answer/7052112)

Invest where justified

Consider additional PIM capability, API integration, orchestration or monitoring when a repeated task exposes a specific gap. APIs do not guarantee assistant access or visibility.

Tools by job

Evaluate challenge → documented capability → expert user → output. Vendor documentation is not independent outcome evidence.

Geoffy · Optimise; Monitor is a separate offering the vendor marks early access.

Challenge	Product-page content and consistency between visible information and structured data.
Documented capability	Geoffy describes product-page content, structured data, claim checks and catalogue drift control. Its current site says Optimise is available for Shopify and WordPress.
Expert user	E-commerce, marketing and product-data owners.
Output	Vendor-described product-page content and a structured-data mirror; monitoring is an early-access offering per Geoffy.

> Vendor-documented capability, not proof of increased visibility or sales. No Commonwork demo or independent outcome is recorded.

Geoffy · Geoffy: GEO for Shopify and WooCommerce stores (https://geoffy.ai/)

Shopify App Store / Geoffy listing · Geoffy on the Shopify App Store (https://apps.shopify.com/geoffy)

Begen · AdMultify · AdMultify

Challenge	Producing campaign creative variants from approved source assets.
Documented capability	Begen describes uploading a key visual, mapping assets, previewing/refining and generating ad variations.
Expert user	Marketing and creative teams.
Output	Creative variants for expert review and distribution.

> This is creative production, not product recommendation or assistant-visibility measurement. No independent campaign outcome or Commonwork demo is recorded.

Begen · AdMultify by Begen (https://begen.ai/)

Rierino · Rierino Commerce / platform

Challenge	Connecting commerce services and orchestrating complex operational workflows.
Documented capability	Rierino describes commerce modules, APIs/workflows and agent-executed pricing, inventory and promotion flows; its docs describe deployable agents and orchestration.
Expert user	Commerce operations, product-data and architecture teams.
Output	Configured commerce services, APIs and workflows, subject to implementation and governance.

> Vendor-documented platform capability, not an independent result or Commonwork integration/demo. Confirm the exact module and commercial scope.

Rierino · Rierino Commerce (https://rierino.com/solutions/commerce)

Rierino documentation · Rierino platform documentation overview (https://docs.rierino.com/)

Start with one bounded use case

Start with one customer or operational task—not a platform replacement.

Week 1 · Choose and baseline

Choose one task, an expert owner, a current baseline and a success measure.

Week 2 · Assess

Identify the product/offer information, system access, permissions and controls needed. Start with existing systems.

Week 3 · Test

Test one bounded AI-assisted workflow with human approval and a clear exception path.

Week 4 · Review

Review the preselected measure and exceptions. Prioritise people, data or integration gaps; decide whether to repeat, stop or invest.

Optional exercise · Visibility worksheet

Record one dated observation: exact request and context; products and sellers separately; reasons and sources; accuracy against the current offer; one evidenced gap and owner. A dated observation is not a ranking or benchmark.

Optional exercise: open the visibility worksheet
